Imaging Excellence

Danbury Health Systems offers advanced imaging procedures at four convenient locations in Danbury and Ridgefield, making it easier for patients to access services with centralized scheduling. Board-certified radiologists, with subspecialty fellowship training, provide an exceptional level of care. A comprehensive range of highly sophisticated imaging tests are conducted in a welcoming environment that focuses on quality and patient comfort. Patients also have access to medical and surgical expertise available at Danbury Hospital should the need arise.

Ridgefield Diagnostic Imaging Center

The imaging facilities

operated by

Danbury Health Systems

offer many benefits:

Advanced imaging technology provides physicians with vital information to detect, diagnose and treat many medical conditions. Your physician may order an imaging procedure for a variety of reasons. Nearly every specialty — orthopedics, cardiology, neurology, oncology, urology, general surgery and more — relies on information gathered from imaging results to develop the most appropriate care plan.

A focus on access and comfort for a quick and smooth patient experience

Designed with the comfort of patients in mind, our four locations in Danbury and Ridgefield offer superior imaging services in a convenient and relaxing setting close to home. With the emphasis on quality service, our skilled staff handles your imaging needs quickly and efficiently. Ample parking and extended weekday and weekend hours allow patients to schedule appointments that fit their lifestyle needs.

Advanced technology enhances patient care

Danbury Hospital's commitment to staying at the forefront of imaging technology means patients have access to a full array of advanced services including mammography, computed tomography (CT), magnetic resonance imaging (MRI), ultrasound, bone density tests, positron emission tomography (PET), and diagnostic x-ray. Among the innovations available are the ultra-fast, 64-slice CT scan and high-strength MRI systems, including a wide bore MRI that reduces feelings of claustrophobia. Radiologists work in a fully digital environment which improves diagnostic accuracy and efficiency, and allows them to easily access images from any of the four facilities.

Specialized care from a team of experts

Our board-certified radiologists are fully accredited to deliver the highest level of care. Radiologists with fellowship training in subspecialty areas — neurology, mammography, muscular skeletal, chest, abdomen and pelvis — provide an additional degree of expertise for interpreting tests. Results are made available promptly to your physician and radiologists are on hand to consult with all referring physicians and specialists, as needed. All locations are accredited by the American College of Radiology which sets safety and quality standards.

Direct access to Danbury Hospital resources

Patients who require additional services can turn to the expertise and resources available at Danbury Hospital, a regional medical center and university teaching hospital. Once again, in 2009 Danbury Hospital ranks in the top 5% nationally for overall clinical excellence* with a team of skilled physicians, nurses and other health care professionals who are committed to customer service and patient safety.

Imaging facilities and contact information

For information about which imaging services are available at each of the four locations, visit Danbury Hospital's web site at danburyhospital.org.

To make an appointment at any of the imaging facilities, call 877-326-4679. With a single phone call, patients can schedule one or more imaging tests in one or multiple locations. It's that easy.
